Extending the capabilities of SharePoint, **conceptClassifier for SharePoint's** integration with Microsoft Office, the Business Data Catalog and the Microsoft Records Center has improved the classification and retrieval process for organizations that require access to unstructured information.

The ability to classify and see '**concepts in context**', significantly increases relevance and precision enabling organizations to increase productivity, reduce costs and gain competitive advantages. Utilizing compound term processing for concept extraction, the classification and taxonomy management technologies deliver the optimal solution for organizations seeking to capture and unlock their information assets.

Fully integrated without the need to build an additional index, **conceptClassifier for SharePoint** seamlessly integrates with Microsoft Search Express and Search Server 2008 delivering enhanced precision and relevancy to the user without the loss of recall.

- Automatic metadata generation
- Automatic classification
- Taxonomy development and maintenance
- Integration with Microsoft Office
- Integration with MOSS, Search Express and Search Server 2008
- No requirement to build an additional index
